Help:

This help file is created to give the users a basic idea of how the system works:

The main functionality of this system is that it allows for the users and admins to work under a singular system to provide maximum efficiency and cost effectiveness. The admins can add data to the tables and delete rows. The system also allows for the users to search companies according to their price constraint. The system also allows for the user to search companies based on the shipping categories the companies provide.

The functionalities the system provides are:

- The user can search for their ideal company by searching according to their price limit.
- The user can also search based on the type of shipping category the companies deliver in.
- The user can sort the data in the table according to price in ascending or descending order.
- The admin can add data in the table with the help of textfields.
- The admin can delete rows according to the admins wish.
- The admin must enter correct values and leave no empty textfields when entering data.
- The user can access this help file from the menu bar to access this file.
- The imported file is stored in csv format so, if the admin wishes to add data into the csv file, proper guidelines must be followed.
